

**THE FAST, EASY, AND SAFE
WAY TO SUPPORT YOUR
MACHINE FOR SERVICE
AND MAINTENANCE.**

Proper
threaded rod
is the only
safe way to
lift.

Universal Service Lift

DZS – 595 and DZS – 596

max. 350kg

max. 650kg

Wisconsin Engineering's new Universal Service Lift makes it easy to access the underside of your mower, tractor, snow blower or ATV for service and maintenance. Simply park the machine on the lift frame, and with a few smooth, effortless turns of the easy turn handle, the machine is raised, safely and securely, and ready for service. Positive interlock and high precision, premium grade lift components ensure minimal lifting effort, maximum security, and virtually unlimited service life. When not in use, the universal service lift folds into a thin, compact package for convenient storage. It can be powered by a cordless drill (not included.)

**Cost effective, universal design
allows use with all major makes
and models of power equipment**

Like all Wisconsin Engineering products, the Universal Service Lift is built for demanding users. Heavy gauge construction, top-of-the-line components, and precision manufacturing yield first rate ease of use, durability, and reliability.
